

BTM Filters

PTFE Membrane

BTM cartridge and capsule filters are constructed with a Polytetrafluoroethylene (PTFE) membrane and are used for bioburden control in non-aqueous liquids, process gases and tank vent filtration. Pore sizes range from 0.10 to 5.0 μm and filter sizes scale from laboratory to full production using identical materials to ensure consistent results.

These single layer, hydrophobic filters are optimized for flow and throughput, and resist wetting by airborne water droplets, making them ideal for air and gas applications. BTM bioburden control filters protect processes and extend the life of sterilizing filters. Each cartridge module is individually tested using the water intrusion method before it is released from manufacture.

Validation

BTM filters are validated using test procedures that comply with ASTM F 838-15(ae1) protocols for the determination of bacterial retention in filters used for liquid filtration. The filters are challenged with the organisms listed below.

0.10µm: *Brevundimonas diminuta*

0.22µm: *Brevundimonas diminuta*

0.45µm: *Serratia marcescens*

Endotoxins

The levels of bacterial endotoxins in aqueous extracts from BTM filters are below current USP limits as specified for water for injection.

Extractables

BTM filters typically exhibit low levels of non-volatile residues.

Toxicity Compliance

The materials used to construct BTM filters are non-toxic and meet the requirements for the MEM Elution Cytotoxicity Test and the requirements for Biological Reactivity Tests in the current version of the United States Pharmacopeia (USP) for Class VI - 121 °C Plastics.

Non-Fiber Releasing

BTM filters comply with Title 21 CFR sections 210.3 (b)(6) and 211.72, for non-fiber releasing filters.

FDA Compliance

Materials meet the requirements listed by the FDA as appropriate for use in articles intended for repeated food contact as specified in Title 21 CFR sections 174.5, 177.1500, 177.1520, 177.1630, 177.2440, and 177.2600 as applicable.

Flow Rates for BTM Cartridges by Pore Size

Water

Air

Flow rates for Cartridge filters are per 10-inch length. The test fluid is water or compressed air at ambient temperature.

Flow Rates for BTM Capsules by Pore Size

Water

Air

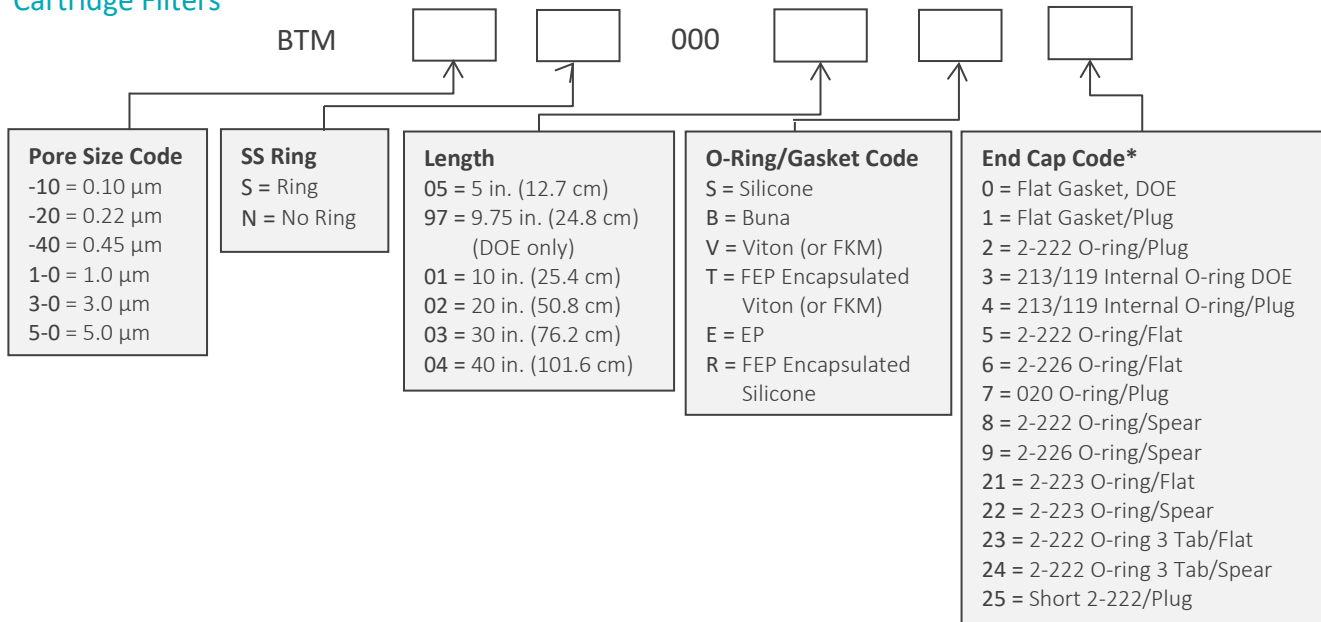

Flow rates for Capsule filters are tested using a 2" capsule filter with 1" sanitary inlet and outlet ports. The test fluid is water or compressed air at ambient temperature. Flow rates for larger capsules will scale with filtration area. Rates will vary based on end configuration of the capsule.
