EPS/HA Filters provide the same wide selection of single layer Polyethersulfone (PES) cartridge and capsule filters as the standard EPS filter but with a higher filtration area which delivers a higher flow rate. All EPS products are designed for the electronics industry and used for removing fine and ultrafine particles from aqueous liquids. Pore sizes range from 0.02 to 0.45 µm and the filter devices scale from laboratory to full production using identical materials to ensure consistent results.

The hydrophilic EPS/HA filters have low extractables for fast rinse-up to conductivity limits and fast rinse-down to TOC limits. EPS/HA filters deliver high flow and throughput with chemical compatibility across a wide pH range. They are commonly utilized in the final filtration of liquids for point of use tools.

EPS/HA filters are pulse power flushed until the rinse effluent reaches 18+ Megohm-cm and less than 3ppb TOC. Each filter is individually tested to ensure integrity.

Critical Process provides unrivaled delivery times, technical consulting before purchasing, and very competitively priced high-performance products. Our comprehensive testing & analysis and validation services support your team whenever they need it. Your process experts partnering with our filtration experts is how we deliver your company’s solution right the first time.

EPS/HA filter is recommended for:
- UPDI Water
- Acids & Bases
- Etch Baths
- Solvents
- Bulk Chemicals
- Plating Solutions

**Fine Particle Removal**

**Clarification & Prefiltration**

**CARTRIDGES – Nominal Dimensions**
Length: 5 to 40 in. (12.7 to 101.6 cm)
Outside Diameter: 2.75 in. (7.0cm)

**CAPSULES – Nominal Dimensions**
Length: 2 to 30 in. (5.1 to 76.2 cm)
Outside Diameter: 3.50 in. (8.9 cm)
## Maximum Operating Parameters

### Sanitization & Sterilization

**Filtered Hot Water**
90 °C (194 °F), 30 minutes, multiple cycles, max 3 psid forward flow

**Inline Steam**
275 °F (135 °C), 30 min, 25+ cycles

**Autoclave**
250 °F (121 °C), 30 min, 25+ cycles

**Chemical Sanitization**
Performed using industry standard concentrations of hydrogen peroxide, peracetic acid, sodium hypochlorite and other selected chemicals.

*Cartridge Filters – For all elevated temperature procedures above, a stainless-steel support ring is required.

* For water wetted membrane
** Test pressure exceeds operational limits of capsule filters. Use the Diffusion Test method.

### Construction Materials

- **Filtration Media**
  - Single Layered Polyethersulfone (PES) Membrane

- **Media Support**
  - Polypropylene

- **End Caps, Center Core, Outer Support Cage, Capsule Housing**
  - Polypropylene

- **Sealing Method**
  - Thermal Bonding

- **O-Rings/Gaskets**
  - Buna, Viton® (or FKM), EPDM, Silicone, FEP Encapsulated Silicone, FEP Encapsulated Viton (or FKM)

### Extractables

EPS/HA filters typically exhibit low levels of non-volatile residues and conform with USP <661>/<665>.

### TOC and Conductivity

EPS/HA filter water effluent conforms with the TOC and water conductivity standards of SEMI Standard F104 (modified) and F63 after an appropriate flush with ultrapure water.

### Non-Fiber Releasing

The EPS/HA filters comply with Title 21 CFR sections 211.72 and 210.3 (b)(6), for non-fiber releasing filters.
Flow rates for Cartridge filters are per 10-inch length. The test fluid is water at ambient temperature.

Flow rates for Capsule filters are tested using a 2” capsule filter with 1” sanitary inlet and outlet ports. The test fluid is water at ambient temperature. Flow rates for larger capsules will scale with filtration area. Rates will vary based on end configuration of the capsule.
EPS/HA Filters Ordering Information

Fill in the corresponding codes in the boxes below to build your Part Number.
