PNC Filters
Positively Charged Nylon 6,6 Membrane

PNC cartridge and capsule filters consist of a positively charged Nylon 6,6 membrane used for filtering aqueous and non-aqueous liquids that contain negatively charged contaminants. Available in 0.10, 0.22, 0.45 and 0.65 µm, PNC filters are validated for bacteria retention to provide reliable sterile filtration performance.

The positive charge removes negatively charged biological contaminants such as endotoxin, virus and other cell fragments. Depending on level of contaminant and flow rate, PNC filters will typically exhibit > 3-log removal of endotoxin. This combination of functionality makes the PNC filter an excellent choice for pharmaceutical and bioprocessing applications.

Critical Process provides unrivaled delivery times, technical consulting before purchasing, and very competitively priced high-performance products. Our comprehensive testing & analysis and validation services support your team whenever they need it. Your process experts partnering with our filtration experts is how we deliver your company’s solution right the first time.

PNC filters are recommended for sterilizing and endotoxin removal in:
- Process Water
- Water for Injection (WFI)

Sterilizing Filters
Endotoxin Removal

CARTRIDGES – Nominal Dimensions
Length: 5 to 40 in. (12.7 to 101.6 cm)
Outside Diameter: 2.75 in. (7.0 cm)

CAPSULES – Nominal Dimensions
Length: 2 to 30 in. (5.1 to 76.2 cm)
Outside Diameter: 3.50 in. (8.9 cm)
### Maximum Operating Parameters

</tr>
</tbody>
</table>

* For water wetted membrane
** Test pressure exceeds operational limits of capsule filters.
Use the Diffusion Test method.
Validation

PNC filters are validated using test procedures that comply with ASTM F 838-15(ae1) protocols for the determination of bacterial retention in filters used for liquid filtration. The challenge level is a minimum of $10^7$ organisms per cm$^2$ of filter media. CPF filters have > 7-log removal when challenged with the organisms listed below (0.10 $\mu$m and 0.22 $\mu$m meet the FDA definition of sterilizing grade filters).

0.10$\mu$m: *Brevundimonas diminuta*
0.22$\mu$m: *Brevundimonas diminuta*
0.45$\mu$m: *Serratia marcescens*
0.65$\mu$m: *Saccharomyces cerevisiae*

Endotoxins

The levels of bacterial endotoxins in aqueous extracts from PNC filters are below current USP limits as specified for water for injection.

Extractables

PNC filters typically exhibit low levels of non-volatile residues.

TOC and Conductivity

PNC filters conform with TOC standards of USP <643> and the water conductivity standards of USP <645> after an appropriate flush with purified water.

Toxicity Compliance

Materials used to construct PNC filters are non-toxic and meet the requirements for the MEM Elution Cytotoxicity Test and the requirements for Biological Reactivity Tests in the current version of the United States Pharmacopeia (USP) for Class VI - 121 °C Plastics.

Non-Fiber Releasing

PNC filters comply with Title 21 CFR sections 210.3 (b)(6) and 211.72, for non-fiber releasing filters.

FDA Compliance

Materials meet the requirements listed by the FDA as appropriate for use in articles intended for repeated food contact as specified in Title 21 CFR sections 174.5, 177.1500, 177.1520, 177.1630, 177.2440, and 177.2600 as applicable.
Flow rates for Cartridge filters are per 10-inch length. The test fluid is water at ambient temperature.

Flow rates for Capsule filters are tested using a 2” capsule filter with 1” sanitary inlet and outlet ports. The test fluid is water at ambient temperature. Flow rates for larger capsules will scale with filtration area. Rates will vary based on end configuration of the capsule.
PNC Filters Ordering Information

Fill in the corresponding codes in the boxes below to build your Part Number.

To consult with one of our technical team members, request a quote or place an order:
call (603) 880-4420 or contact us here.

**Please note this product is not designed or approved for use in Hemodialysis applications**
