PTM cartridge and capsule filters are constructed using a Polytetrafluoroethylene (PTFE) membrane and are validated for sterilizing filtration of gases and non-aqueous liquids. Pore sizes range from 0.10 to 5.0 µm and the filter sizes scale from laboratory to full production using identical materials to ensure consistent results.

The hydrophobic PTM filters resist wetting by airborne water droplets, making them ideal for air and gas applications. The broad chemical compatibility of the PTM filters makes them well suited for aggressive solvents and other non-aqueous liquids. Each cartridge module is individually tested using the water intrusion method before it is released from manufacture.

Critical Process provides unrivaled delivery times, technical consulting before purchasing, and very competitively priced high-performance products. Our comprehensive testing & analysis and validation services support your team whenever they need it. Your process experts partnering with our filtration experts is how we deliver your company’s solution right the first time.

PTM sterilizing filters are recommended for:
- Compressed Air
- Pressurized Gases
- Fermentation Air
- Solvents
- Tank Vents

**Sterilizing Filters**

**Tank Vent & Process Gas**

**CARTRIDGES – Nominal Dimensions**
Length: 5 to 40 in. (12.7 to 101.6 cm)  
Outside Diameter: 2.75 in. (7.0 cm)

**CAPSULES – Nominal Dimensions**
Length: 2 to 30 in. (5.1 to 76.2 cm)  
Outside Diameter: 3.50 in. (8.9 cm)
### Maximum Operating Parameters

* Bubble Point for membrane wetted with 60% IPA / 40% water solution.
Validation
PTM filters are validated using test procedures that comply with ASTM F 838-15(ae1) protocols for the determination of bacterial retention in filters used for liquid filtration. The challenge level is a minimum of $10^7$ organisms per cm² of filter media. CPF filters have > 7-log removal when challenged with the organisms listed below (0.10μm and 0.22μm meet the FDA definition of sterilizing grade filters).

- 0.10μm: *Brevundimonas diminuta*
- 0.22μm: *Brevundimonas diminuta*
- 0.45μm: *Serratia marcescens*

Validation Guides available upon request.

Endotoxins
The levels of bacterial endotoxins in aqueous extracts from PTM filters are below current USP limits as specified for water for injection.

Extractables
PTM filters typically exhibit low levels of non-volatile residues.

Toxicity Compliance
Materials used to construct the PTM filters are non-toxic and meet the requirements for the MEM Elution Cytotoxicity Test and the requirements for Biological Reactivity Tests in the current version of the United States Pharmacopeia (USP) for Class VI - 121 °C Plastics.

Non-Fiber Releasing
PTM filters comply with Title 21 CFR sections 210.3 (b)(6) and 211.72, for non-fiber releasing filters.

FDA Compliance
Materials meet the requirements listed by the FDA as appropriate for use in articles intended for repeated food contact as specified in Title 21 CFR sections 174.5, 177.1500, 177.1520, 177.1630, 177.2440, and 177.2600 as applicable.

*High Temperature Cartridge configuration is available.
Critical Process Filtration, Inc.

Water Flow Rates for PTM Cartridges by Pore Size

Flow rates for Cartridge filters are per 10-inch length. The test fluid is water or compressed air at ambient temperature.

Air/Gas Flow Rates for PTM Cartridges by Pore Size

Flow rates for Cartridge filters are per 10-inch length. The test fluid is water or compressed air at ambient temperature.
Flow rates for Capsule filters are tested using a 2” capsule filter with 1” sanitary inlet and outlet ports. The test fluid is water or compressed air at ambient temperature. Flow rates for larger capsules will scale with filtration area. Rates will vary based on end configuration of the capsule.
