HPPS Mini-Capsules are designed for laboratory use with their small filtration area and size. They are made from all the same materials as our larger HPPS filters to ensure consistent results at every scale. These validated, dual-layered PES membrane capsules are well suited for sterilizing products with high particle loads. Pore sizes range from 0.03 to 1.0 µm.

Designed with a High Capacity PES prefilter layer and Asymmetric PES final filter layer, HPPS Mini-Capsule filters deliver high flow across a wide pH range. The HPPS filter’s low binding characteristics make them ideal for filtering products with preservatives and proteins that can adsorb to media. They are flushed to remove manufacturing debris and reduce extractables. Products are 100% integrity tested. HPPS Mini-Capsules are available pre-sterilized.

Critical Process provides unrivaled delivery times, technical consulting before purchasing, and very competitively priced high-performance products. Our comprehensive testing & analysis and validation services support your team whenever they need it. Your process experts partnering with our filtration experts is how we deliver your company’s solution right the first time.

HPPS filters are recommended for:
- SVPs & LVPs
- Diagnostics
- Buffers
- WFI, Water Purification
- Vaccines
- Biologics
- Ophthalmics

Validation
HPPS Mini-Capsule filters are validated using test procedures that comply with ASTM F 838-15(ae1) protocols for the determination of bacterial retention in filters used for liquid filtration. The challenge level is a minimum of 10^7 organisms per cm² of filter media. CPF filters have > 7-log removal when challenged with the organisms listed below (0.03µm, 0.10µm and 0.22µm meet the FDA definition of sterilizing grade filters).

- 0.03µm: *Acholeplasma laidlawii*
- 0.10µm: *Brevundimonas diminuta*
- 0.22µm: *Brevundimonas diminuta*
- 0.45µm: *Serratia marcescens*
- 0.65µm: *Saccharomyces cerevisiae*

Validation Guides available upon request.

Endotoxins
The levels of bacterial endotoxins in aqueous extracts from HPPS Mini-Capsule filters are below current USP limits as specified for water for injection.

Extractables
HPPS Mini-Capsule filters typically exhibit low levels of non-volatile residues.

TOC and Conductivity
HPPS Mini-Capsule filters conform with TOC standards of USP <643> and the water conductivity standards of USP <645> after an appropriate flush with purified water.

Toxicity Compliance
Materials used to construct HPPS Mini-Capsule filters are non-toxic and meet the requirements for the MEM Elution Cytotoxicity Test and the requirements for Biological Reactivity Tests in the current version of the United States Pharmacopeia (USP) for Class VI - 121 °C Plastics.

Non-Fiber Releasing
HPPS Mini-Capsule filters comply with Title 21 CFR sections 210.3 (b)(6) and 211.72, for non-fiber releasing filters.

FDA Compliance
Materials meet the requirements listed by the FDA as appropriate for use in articles intended for repeated food contact as specified in Title 21 CFR sections 174.5, 177.1500, 177.1520, 177.1630, 177.2440, and 177.2600 as applicable.

Flow Rates for HPPS Mini-Capsules by Pore Size

Flow rates for Mini-Capsule filters are per filter. The test fluid is water at ambient temperature. Flows are tested using a mini-capsule filter with ¼” Sanitary inlet and outlet ports. Rates will vary based on end configuration of the mini-capsule.
