PPM cartridge and capsule filters are single layer, polypropylene membrane filters validated for sterilizing in gas and tank vent filtration applications, and in non-aqueous liquids. Pore sizes are from 0.10 to and 0.22 µm and available filter devices scale from laboratory to full production using identical materials to ensure consistent results.

PPM filters are hydrophobic and resist wetting by airborne water droplets, making them ideal for air and gas applications. The broad chemical compatibility of polypropylene makes the filters suitable for aggressive solvents and other non-aqueous liquids. Cartridge modules are 100% integrity tested before release from manufacture.

Critical Process provides unrivaled delivery times, technical consulting before purchasing, and very competitively priced high-performance products. Our comprehensive testing & analysis and validation services support your team whenever they need it. Your process experts partnering with our filtration experts is how we deliver your company’s solution right the first time.

PPM sterilizing filters are recommended for:
- Compressed Air
- Gases
- Tank Vents
- Bulk Pharmaceutical Chemicals
- Solvents

</table>

* For membrane wetted with 60% IPA / 40% water solution.
Validation
PPM filters are validated using test procedures that comply with ASTM F 838-15(ae1) protocols for the determination of bacterial retention in filters used for liquid filtration. The challenge level is a minimum of $10^7$ organisms per cm$^2$ of filter media. CPF filters have $> 7$-log removal when challenged with the organisms listed below (0.01µm and 0.22µm meet the FDA definition of sterilizing grade filters).

$0.10µm$: *Brevundimonas diminuta*

$0.22µm$: *Brevundimonas diminuta*

Validation Guides available upon request.

Endotoxins
The levels of bacterial endotoxins in aqueous extracts from PPM filters are below current USP limits as specified for water for injection.

Extractables
PPM filters typically exhibit low levels of non-volatile residues.

TOC and Conductivity
The PPM filters conform with TOC standards of USP <643> and the water conductivity standards of USP <645> after an appropriate flush with purified water.

Toxicity Compliance
Materials used to construct the PPM filters are non-toxic and meet the requirements for the MEM Elution Cytotoxicity Test and the requirements for Biological Reactivity Tests in the current version of the United States Pharmacopeia (USP) for Class VI - 121 °C Plastics.

Non-Fiber Releasing
PPM filters comply with Title 21 CFR sections 210.3 (b)(6) and 211.72, for non-fiber releasing filters.

FDA Compliance
Materials meet the requirements listed by the FDA as appropriate for use in articles intended for repeated food contact as specified in Title 21 CFR sections 174.5, 177.1500, 177.1520, 177.1630, 177.2440, and 177.2600 as applicable.
Flow Rates for PPM Cartridges

Flow rates for Cartridge filters are per 10-inch length. The test fluid is water or compressed air at ambient temperature.

Flow Rates for PPM Capsules

Flow rates for Capsule filters are per square foot of membrane area. The test fluid is water or compressed air at ambient temperature. Flows are tested using a 2" capsule filter with ½" FNPT inlet and outlet ports. Rates will vary based on end configuration of the capsule.
PPM Filters Ordering Information

All Critical Process filters are configurable to meet customer specifications. Fill in the corresponding codes in the boxes below to build your Part Number.

To consult with one of our technical team members, request a quote or place an order: call (603) 880-4220 Ext. 106, or send an email to sales@criticalprocess.com
